CSV Source To Client Report Pilot

R2,800 fixed pilot | Remote delivery | 3 to 7 days

I build a simple dashboard/report flow for SMEs, accountants, bookkeepers, and consultants. Upload a sanitized CSV or connect a CSV source URL, choose the important numeric column, then export a clean client-ready report.

Included

- CSV upload or source-link setup.
- Summary cards for totals, averages, ranges, and row counts.
- Batch analytics and contribution bars.
- Exportable client-ready report.
- One revision after the first delivery.

What I Need

- One sanitized CSV file or CSV source link.
- The main column to analyze, such as amount, sales, expenses, revenue, payroll, or profit.
- The report name for the client or management team.
- Payment confirmation: R2,800 upfront or R1,400 deposit.

Best fit

Monthly reports, management accounts, bookkeeping packs, payroll exports, sales reports, expense analysis, client-facing finance summaries, and CSV cleanup/reporting workflows.

Next step

Send one sanitized CSV or CSV source link, and I will confirm the pilot scope. Once payment or deposit is confirmed, I start the dashboard/report setup.

Regards, Hlomla
